[Antenna Sickness 2017](#)

WASHINGTON, August 2014 /PRNewswire: "A Washington, D.C. superior court ruled that five scientific expert witnesses can testify for consumers suffering from brain tumors allegedly caused or promoted by cell phone use....Judge Frederick H. Weisberg, who is presiding over 13 consolidated lawsuits against the telecom industry, ruled that experts met the *Dyas/Frye* legal standards and can offer testimony related to injury causation and health effects. " [1]

Dr. Joel Moskowitz, Ph.D., UC Berkeley School of Public Health: "The Insurance Industry has refused to provide product liability on cell phones due to this concern as they fear that cell phone litigation may turn out like tobacco or asbestos litigation with huge punitive awards." [2]

Business Insurance Magazine: "Could radio-frequency producing antennas that are essential for the wireless world be the next asbestos for the insurance industry? They could, writes Gloria Vogel, managing editor for New York-based Vogel Capital Management. 'The insurance industry must reassess its risk management tools and beef up loss control operations--especially its application of risk management to worker safety within the the wireless ecosystem to avoid potentially huge claims in the future,' she says." [3]

## Asbestos and Wireless Radiation:

### Parallel Stories of Greed, Genocide and Cover-Up

RF/microwave radiation, now polluting the human environment without limit, is well-documented to be a **"very efficient carcinogen."** [4] As a condition of employment, millions of Americans in the workplace are compelled, for hours each day, to endure multi-frequency exposure to this radiation. Their exposures come from cell/smart phones, cordless phones, walkie talkie radios, wireless tablets, computers, inventory transmitters, cell tower and building-mounted antennas, Wi-Fi signal generators, routers, peripherals, wireless security systems, etc. The same is true for millions of US students caught in the pernicious web of wireless classrooms and campuses.

Most of these workers and students are uninformed about the myriad health hazards of compulsory, high-frequency radiation which cannot be naturally detected through sight, sound, taste, smell or touch. Left without adequate information, they cannot give informed consent for the macabre bio-experiment in which they have been forcibly enrolled.

History replicates! This is the value of understanding history. Wi-workers and Wi-students need to know the sordid story of asbestos USA in order to fully understand their own perilous situation. The tragedies of asbestos and Wi-radiation are both the bi-products of greed and deceit. And they share many other commonalities.

Asbestos is a naturally-occurring form of several soft mineral silicates. Asbestos easily disintegrates into millions of microscopic fibers so light they can float in the air indefinitely. Needle-sharp and shaped like spears, thousands of *asbestos fibers can be inhaled in a single breath of air*. Globally, millions of people have died from asbestos-induced cancers and lung diseases. The Mesothelioma Applied Research Foundation reports: "**Starting at the turn of the [twentieth] century, British investigators discovered a relationship between exposure to high levels of asbestos and respiratory disease. These early studies were suppressed by the government at the request of the asbestos industry. By the mid 50s, American medical researchers had joined the chorus of concerned professionals identifying asbestos as hazardous. Much of their work was never published or was suppressed and/or disputed by scientists in the pay of the asbestos industry.**" [5]

Therefore, the asbestos spewed haphazardly across the USA for decades continues to sicken and kill today. Millions of tons of asbestos remains embedded in older homes and commercial buildings across the nation. An estimated 1.3 million workers are still exposed to asbestos in their workplaces. [6] About 10,000 Americans still die each year from asbestos-related diseases. [7] On September 11, 2001, when the World Trade Center buildings collapsed into rubble, the fireproofing spray foam used on at least forty floors within the North Tower infused the air, soil and buildings all over lower Manhattan with the most deadly form of asbestos. [8] Over 2500 first responders at the WTC disaster are now dead from service-related toxic exposures, while thousands of others are sick. [9] Asbestos casualties among the Manhattan population forced to breathe and ingest vast quantities of 9-11 asbestos dust have yet to be tallied. Some estimates are that this mass exposure will culminate in one in ten extra cancers. [10] Cancer is believed to be induced by co-factors. Further increasing their risks for painful and premature death, residents of New York City are among the most heavily Wi-irradiated people in the world, with many thousands of active RF/microwave antennas mounted across the urban terrain.

According to the Government Accountability Office (GAO), at least 100 American-based companies have gone into bankruptcy because of asbestos-related liabilities. By 2011, GAO had identified \$36.8 billion in assets spread among 60 personal injury trusts designed to pay out claims related to present and future asbestos litigation. [11] By 2002, there were already 730,000 claims, [12] with hundreds of thousands others still pending. The trust funds are feared insufficient to cover total future liabilities. With nearly all Americans now heavily exposed to Wi-radiation from myriad sources, it's a safe bet that the future liabilities of the Wi-industry will literally dwarf those of the asbestos era.

*The horrific asbestos story of Libby, Montana, is a perfect parable for what is happening to the entire Wi-irradiated American population today.* The Libby tragedy did not become national news until 1999, when the Seattle Post-Intelligencer reported that hundreds of asbestos miners and their family members had died there and that thousands more had become ill. [13] By 2005, it was estimated that at least one-third of Libby's roughly 8000 townspeople would eventually die in an epidemic of asbestos disease. [14]

**Any American worker or any student  
who is RF/microwave-irradiated for hours each day**

--as a condition of employment or education--

is another Perley Vatland.

Perley Vatland was a Montana resident and family man who landed a job in a vermiculite mine near Libby in 1954. The mine was operated by the Zonolite Company which, in 1963, merged with the politically powerful corporate megalith, W. R. Grace. Vatland and other workers at the mine had no idea that their work environment was loaded with asbestos fibers: "As the new man at the mine, Perley's first job was working as a sweeper in the dry mill. Each day after work, he arrived home covered in a thick white dust....The dust at the mine was ubiquitous, but the men tolerated it with a shrug. 'No worse than farm dust they were told.' Ten years later, the price had escalated. Perley had come down with a series of lung ailments he didn't seem able to shake....Once robust and able to work long hours, his health broke down and he suffered greatly over the next decade. He was stunned that the managers at W.R. Grace didn't seem to care....He was unable to breathe most of the time, and his chest felt like it was on fire. After he died [five days before he was eligible for his 20-year pension] the company declined to pay his full pension to the family." [15]

The mine near Libby was a hotbed of tremolite, *the world's most dangerous variety of asbestos*. At its zenith, the mine produced two million tons of ore annually, employing about 200 people. For at least five decades, the mine's deadly products, including vermiculite used for agriculture, were shipped all over the US and throughout the world. An estimated 400 people living in or near Libby have suffered protracted, excruciating illness and death from asbestos-related diseases. According to the Center for Asbestos Related Disease, there are more than 1800 active cases of asbestos disease among people exposed to Libby mining pollution. [16] Countless people across the US are at still at risk of eventually developing asbestos-related diseases due to the pollution shipped from the Libby pit of death. The inches-thick WTC dust that covered Lower Manhattan contained tremolite from the Libby mine. [17]

In 2005, federal prosecutors armed with numerous incriminating documents, alleged "environmental crime" and issued a 10-count criminal indictment against W. R. Grace and seven of its top officials. Among the charges were conspiracy and the knowing endangerment of the people of Libby. But in May 2009, some 50 lawyers for W.R. Grace, plus a shamelessly biased trial judge, managed to withhold enough evidence from jurors to beat all charges and produce an acquittal. "It is unfortunate that so much evidence was withheld from the jury by the district court's evidentiary rulings, including some of the most compelling internal memos written by W. R. Grace officials about the harmful effects of their mining operations," said David Uhlmann, an early architect of the U.S. Justice Department's case against Grace. [18] In 2011, the State of Montana awarded a \$43 million dollar settlement to more than a thousand asbestos victims in the Libby area who had sued the state for failure to intervene while hundreds sickened and died. Montana had known as early as 1956 that miners and their families, plus the entire population of Libby and the neighboring town of Troy, were in extreme danger from tremolite asbestos, but officials protected the asbestos industry with silence. [19]

For years the stack on dry mill at the Libby mine excreted about 24,000 pounds of asbestos laden dust per day. Although the Environmental Protection Agency (EPA) has spent at least \$370 million since 1999 to clean up some asbestos contamination in the Libby area, it was recently discovered that tremolite still pollutes hundreds of treed acres around the mine. After some of these contaminated trees were harvested, their bark was trucked to many unknown destinations across the nation beginning in 2007. In 2011, CBS News reported that the EPA had known for at least three years that the bark was

asbestos-laden, but did nothing to stop the shipment of 15,000 tons of the contaminated material until the Associated Press began an investigation. [20]

In his startling expose, *Fatal Deception*, Michael Bowker documents how both federal and state governments long withheld from Libby mine workers and their families critical information about the deadly hazards of their environment: "By 1956, asbestos was officially listed as an ingredient of the dust at the mine....Company records showed the asbestos content of the dust to be from eight percent to 20 percent.... Despite this knowledge, the miners were not told of the asbestos dangers....Bob Wilkins still recalls the cool, spring day in the latter part of March 1979 when he first learned that asbestos was a danger at the mine....That day, the government man [NIOSH inspector Robert Smith] told Wilkins that he had been all over the country doing various mineral studies. He mentioned offhandedly that he had once found a deposit of asbestos in a copper mine in Arizona. 'I'm glad we don't have any asbestos around here,' Wilkins told Smith. 'All we have up here in Libby is tremolite.' Smith gave Wilkins a long, funny look. Without a word, he turned and walked back to his government truck. A few minutes later he came back with a huge book on rocks and minerals....'Tremolite,' the book stated, 'is the most dangerous form of asbestos.' " [21]

Even a few microscopic of asbestos particles, inhaled or ingested by a victim, can initiate the following terminal diseases:

1. **MESOTHELIOMA**: a fatal and especially painful asbestos-initiated cancer that begins in the lungs (pleural) or stomach (peritoneal) and progresses to eat out the ribs, diaphragm, spine and heart.
2. **ASBESTOSIS**: an asbestos initiated lung disease resulting in extensive scarring and a downward spiral of slow, painful suffocation as damaged lung tissues no longer pass oxygen to the bloodstream, nor properly rid the body of carbon dioxide. (A percentage of people with asbestosis go on to develop lung cancer.)
3. **PLEURAL DISEASE**: a painful condition involving hardening of lung lining tissues as fibrosis plagues rob the lungs of their elasticity, causing progressive and painful degradation of both breathing and circulation.

Bowker wrote in *Fatal Deception*: "The story of asbestos is a revelation of immense corporate, political and legal malfeasance. It is a story of profiteers who knowingly exposed unsuspecting workers and consumers to a sure and painful death."

This is a precise description of today's predatory wireless radiation industry. Sadly, Americans of the twenty-first century are caught in the same information vacuum about the hazards of Wi-radiation as were the downtrodden Libby miners prior to 1979.

Bowker also revealed: "The asbestos industry's tentacles have reached the highest echelons of political power. The industry's footprints via the Oval Office, are all over the backs of regulatory agencies that repeatedly failed to protect workers and consumers."

This is an excellent description of today's wireless radiation industry which, through campaign contributions and massive propaganda, controls the Congress, the White House and therefore appointees at the Federal Communications Commission (FCC). Through tainted federal law (the Telecommunications Act of 1996), the industry is exempt from adequate regulatory control and oversight of the deadly, pulsing Wi-radiation which hugely contaminates the entire nation.

After his excruciating death, Perley Vatland's family received \$37 a month from W. R. Grace. That is *big money* compared to what millions of US Wi-victims will (never) receive from Wi-device makers, telecom service providers, smart meter manufacturers, tower profiteers who lease space for antennas, and the purveyors of lucrative bluetooth and Wi-Fi technologies.

## Parallels Between Asbestos and Wireless Radiation

### Parallel

### One:

◆ The Environmental Protection Agency (EPA) confirms that “there is no known safe exposure level for asbestos” since asbestos is a potent carcinogen (IARC Group 1A) .

◆ Environmental expert Cindy Sage, who helped compile vast scientific documentation for the BioInitiative Report 2012 (2014) states: "**There are no safe levels [of microwave radiation] for children. None. Zero.**" [22] This is the case because RF/microwave radiation propagated at various frequencies is well-documented to destroy (micronucleate) human DNA. Micronucleation of the DNA is a known precursor for tumors and blood cancers.

### Parallel

### Two:

◆ All asbestos-induced diseases (mesothelioma, asbestosis and pleural fibrosis) are excruciatingly painful and life- shortening.

◆ Numerous bio-effects of wireless RF/microwave radiation are severely health-impairing and life-threatening to the entire American population. Communications microwaves lay the foundation for: a multitude of human cancers, hearing and vision damage, glandular malfunction, stroke, cardiac abnormalities, brain damage and immune system shutdown.

### Parallel

### Three:

◆ The children of Libby and Troy in Montana were among those most horribly abused by the asbestos industry. Mine operators not only ruthlessly sickened and killed their working parents, but also knowingly contaminated school grounds with tons of asbestos-contaminated soils spread over the school track and ball fields used by the children of Libby until 1998. [23]

◆ The children of America are specifically targeted with provocative advertising for wireless devices and technologies while schools across the nation are burdened with toxic wireless antennas. The wireless industry routinely places telecom antennas next to schools, and even on the roofs of school buildings, since children have been induced and cultivated to be the most avaricious of wireless consumers. Seen below on the left is an antenna farm next to a school for young children in Nevada. On the right is a microwave antenna installation erected directly over the sports field and stadium at a middle school in Virginia. *Epidemiological studies from around the world confirm that people trapped at close proximity to antenna towers are sick, sick, and sick.* A nation which allows the siting of carcinogenic wave transmitters mere feet from school buildings and play fields *does not truly care* for the health and safety of its children.

Two cell towers next to a school.  
"Safe" distance from these two towers would be 2 to 3 miles!

#### Parallel Four:

◆ The

microscopic fibers of asbestos can enter human lungs and digestive tracts without being seen, heard, smelled or tasted. Victims breathe and eat these fibers with little or no preliminary physical indications of harm.

◆ Without being seen, heard, smelled or tasted, wireless RF/microwave radiation flows as a *carcinogenic voltage* through human bodies, severely damaging DNA and interrupting normal bodily processes. Victims often overlook preliminary physical warning indications as inconsequential and few make the connection between their wireless exposure and resulting symptoms of allergy, heart malfunction and illness.

#### Parallel Five:

◆ Serious illness resulting from asbestos exposure can take from ten to 40 years to manifest. In the case of the Libby atrocity, the large lag time between exposure and death allowed the asbestos industry to successfully deny its culpability and blame the preliminary illness of asbestos workers on other factors, such as tobacco use.

◆ Microwave-induced Wi-cancers and Wi-dementia may require five, 10 or 20 years to manifest. The lag time between exposure and serious symptoms enables the radiation industry to deny its culpability and/or to blame endemic radiation illnesses on other factors, such as aging.

#### Parallel

#### Six:

◆ For decades, the asbestos industry deliberately and successfully suppressed information on the deadly effects of its products. The industry quashed numerous damning medical studies and withheld medical information about the dangers of asbestos from

both its employees and consumers. Prosecutors who indicted W.R. Grace officials for environmental crimes in Libby verified that the company was secretly armed with numerous studies documenting the dangers of their mined products. [24]

◆ The wireless radiation industry has spent unlimited \$billions to cover up the deadly effects of its wireless products and services. It has blatantly quashed its own damning medical studies [25] and it continues to withhold, from both workers and consumers, full disclosure about the dangers of chronic, near-field microwave exposure from wireless technologies and devices.

## **Parallel**

## **Seven:**

◆ Already by the 1930s, there were numbers of medical reports indicating that asbestos dust was a significant danger to both workers and the general public. Federal and state agencies were fully apprised of these reports, but they failed to warn. Governing authorities had reason to pamper and protect the asbestos industry because, since the 1930s, the military has used asbestos in large quantities for American warships, battlefield equipment, etc.

◆ During WWII, when radar microwaves began to manifest illness and impairment among US military personnel, volumes of subsequent military studies verified the toxicity of microwave radiation. Many new reports from labs all over the world continue to reaffirm the hazards. Both the military and federal regulators are fully apprised of these studies and reports which they refuse to publicly acknowledge. The U.S. government pampers the wireless radiation industry because it derives billions in revenues from selling wireless spectrum and it demands wireless radiation for surveillance and tracking networks across the nation. The U.S. military also uses wireless technologies for powerful communications, radar and drone systems.

## **Parallel**

## **Eight:**

◆ There is still little federal oversight on the manufacture and use of thousands of asbestos-containing products sold in USA today. Government regulators rely mainly on asbestos industry data. There is virtually no warning labeling required for the numerous asbestos-contaminated consumer items still sold across the nation. The public is not adequately warned about the millions of asbestos-contaminated buildings, while many dangerous asbestos waste sites still blight the nation.

◆ There are still no realistic health warnings required on consumer wireless products and devices which emit high-frequency RF/microwave radiation. The public remains in the dark about the dangers of microwave antenna installations that emit high levels of mixed-field carcinogenic waves across the environment, in some cases, in blatant violation of FCC exposure standards. [26] FCC regulators impose almost no enforcement actions and rely on the radiation industry to churn out tainted studies and to voluntarily "comply" with obsolete and non-protective emissions and exposure "guidelines."

## **Parallel**

## **Nine:**

◆ Asbestos-related diseases have been ignored by the U.S. government and little federal money has been spent on prevention and treatment of asbestos illnesses. There are few medical experts fully qualified to identify and recognize asbestos diseases and it is certain that thousands of asbestos-induced deaths each year are not properly certified as such.

◆ Microwave-related diseases have been virtually ignored by the U.S. government and no federal money has been spent on the prevention and treatment of microwave sensitivity and microwave-induced illnesses. There are currently few medical experts qualified to identify and recognize microwave-induced conditions and countless wireless radiation deaths across the nation will never be properly certified as resulting from RF/microwave exposure.

## **Parallel Ten:**

◆ By 1932, many insurance companies had opted out of insuring most asbestos workers.

◆ Today, insurance companies opt out of insuring against product liability on wireless devices and no insurance company expressly insures against illness or death from exposure to wireless technologies.

## Parallel

## Eleven:

◆ After many years of struggle and defeat in the legal arena, asbestos victims began to prevail in litigation against asbestos companies on grounds that the industry **KNEW but FAILED TO WARN**. However, to this day US asbestos victims as a whole have never been adequately compensated for their illnesses and death by the asbestos corporate megalith. The industry has managed to protect itself from paying adequate compensation through a variety of legal machinations and avoidance strategies, including bankruptcy filings and under-funded liability trusts.

◆ Wireless radiation victims have not yet begun to win in US courts against the wireless corporate megalith. When litigants eventually do begin to prevail in court, on grounds that the radiation industry **KNEW but FAILED TO WARN**, Wi-victims will predictably never be fully compensated for their pain, suffering and loss because the industry will likely find numerous ways to avoid adequate compensation. In 2009, Motorola won a court case which reportedly may prohibit future lawsuits for brain tumors caused by cell phone manufactured after 1996. [28] This case indicates that the Wi-industry holds the upper hand and is demonstrably thrilled to "stick it" to some 15,000 people who develop glioma brain tumors in the US each year.

## Parallel Twelve:

◆ After 9-11, asbestos levels found by independent labs in the dust inundating Lower Manhattan was comparable to those found in Libby after years of mining pollution. [27] EPA head Christine Whitman ordered EPA headquarters to be decontaminated, then falsely assured citizens of Manhattan that the pollution levels in the general environment were "safe." [29]

◆ Despite massive scientific and medical evidence to the contrary, FCC and FDA publications still falsely assert that there is "no evidence" of a public health hazard from wireless devices and environmental transmitters irradiating at power densities within the deadly, thermal-based emissions and exposure standards condoned by the FCC.

## What Lessons Can We Learn?

In 1989, the EPA attempted to ban most asbestos-containing products under the Toxic Substances Control Act. But in 1991, the George Bush Sr. administration obstructed this ban [30] and that same year the EPA's rule to ban was remanded by the Fifth Circuit Court of Appeals. Still today, Congress is unable to take reasonable action on urgent asbestos issues because *Capitol Hill is an auction house and the highest bidders are invariably the most egregious corporate polluters*. Therefore, asbestos is still a legal additive found in thousands of consumer products sold across the US. None of these products contain a warning label: "...The number of household products containing asbestos, including washing machines, dishwashers, toasters, floors and ceiling tiles--as well as textile products such as clothing, thread, yarn and string--is increasing each year. At the same time, millions of pounds of asbestos are being used annually in the construction of new homes and buildings in the United States. Far from being a problem of the past, asbestos is still legal and still killing us." [31] To learn more about consumer items containing asbestos in the U.S., [CLICK HERE](#).

America's military-industrial complex has unleashed both the asbestos and the wireless radiation disasters for its own convenience and profit. It protects corporate interests with duly subjugated congressional and judicial systems. History advises that every American is required to EDUCATE AND PROTECT HIMSELF, or risk the consequences of disability, pain and premature death from state-sanctioned environmental toxins. Wi-addicts who rely on authorities to "protect" them will, like millions of asbestos victims, eventually "drop off the radar" while few even notice that they are gone.

After Libby mine workers and their families finally became apprised of their asbestos exposure in 1979, many continued to work in the mine until it was closed by the EPA in 1990. These workers used the rationale that jobs were hard to come by. And nowadays, even after wireless device users are apprised of the dangers of microwave radiation, many continue to Wi-abuse their bodies, while nurturing rationalizations such as: "I need my job" or "Everyone has to die sometime."

Often, only when the expense and pain of dying from toxic exposure becomes unbearable, do victims finally get the message. After the 2009 federal trial in which W.R. Grace executives escaped punishment for the suffering and deaths of thousands, "...Mike Crill, a former Libby miner sickened by exposure to the asbestos dust, remained outside the Russell Smith federal courthouse crying loudly. 'What did they die for? What am I dying for?' Crill sobbed. 'They are guilty of killing us.' "[32]

Crill's haunting message was echoed in 2012 by attorney David Gonzalez, who stood before his city commissioners in Florida's Pembrook Pines in order to testify that wireless radiation yields a sickly life and early death. Gonzales told the commissioners: **"I, for one, happen to know that cell phones DO cause cancer."** Gonzalez told the commissioners that he had stage four glioma brain cancer due to many hours of cell phone use during the years 2001 to 2011. When not talking on the phone, he carried it inside a breast pocket of his suit. He subsequently developed another tumor in the area of his aortic bifurcation near the site of his phone pocket. [33] Gonzalez, who worked valiantly to save lives with his story, died in late 2014 at the age of 42. Millions of US college students, most of whom are never separated from their mobile devices, and who spend *an average of nine hours per day infusing their bodies with microwave radiation*, [34] should listen to David's informative and impassioned message [RIGHT HERE](#).

The federal government has strategically set current RF/microwave radiation exposure standards to prevent *thermal effects* among the general public, that is, effects which cause immediate and acute symptoms such as burned skin and internal organ damage. Burned skin and acute organ damage from cell tower antennas would make the bio-effects of Wi-radiation quickly obvious to all. But bodies piled in the street is not the way this game is played. *By chronically dosing the population non-thermally*, erosion of the public health is gradual and almost imperceptible. Because everyone is genetically different and because every lifetime of Wi-exposure is unique, the masses can be induced to disintegrate slowly into weakness, low fertility, low immunity, then spiral down into gradual demise--each victim in his own way, each in his own time.

Michael Bowker's warning about the lessons of asbestos should resonate in the minds of all Americans who are now continually irradiated by myriad sources of Wi-pollution, while their government and the Wi-industry remain determined to conceal the inevitable and devastating bio-effects: **"....Illness from asbestos exposure usually take from ten to fifty years to manifest itself in serious symptoms. Had workers and consumers suffered symptoms immediately after exposure, concealment would not have been possible. But they couldn't see, taste or touch the fibers they breathed in, nor could they feel the tiny spears penetrating the soft tissue of the lungs....This prolonged time lag from exposure to symptoms enabled the asbestos industry to continue to deny that asbestos was harmful. "**

Among the most highly regarded radiation experts a generation ago was Dr. Milton Zaret, who conducted RF/microwave research for the US government, including the military. Among his greatest contributions was research on microwave-induced cataracts. In 1973, Dr. Zaret advised a US Senate committee that public exposure to the non-ionizing portion of the electromagnetic spectrum is a **"clear, present and ever-increasing danger."** He explained: **"The dangers cannot be overstated, because most non-ionizing radiational injuries occur covertly, usually do not become manifest until after latent periods of years and when they do become manifest, the effects are seldom realized."** [35]

**AND SO, THE QUESTION REMAINS:**

**HOW MANY AMERICAN WI-VICTIMS WILL DIE EARLY AND MISERABLY  
BECAUSE THEY WERE USED AND DECEIVED JUST LIKE PEARLY VATLAND ?**

**Two important books documenting the perfidious cover-up of  
America's asbestos and Wi-radiation scandals are:**

**Fatal Deception: The Terrifying True Story of How Asbestos is Killing America**

Michael Bowker, Simon and Schuster (2003)

**Cell Phones: Invisible Hazards in the Wireless Age**

Dr. George Carlo and Martin Schram, Carroll and Graf Publisher (2001)
